

**IN THE CLAIMS:**

Please amend the claims as follows, this listing of the claims will replace all prior versions, and listings, of claims in the application:

1-21 (canceled)

22. (Currently Amended) A cooking device, comprising:

a cooking chamber;

a lighting unit for illuminating said cooking chamber;

said lighting unit including at least a first reflector and a light source;

said first reflector including at least a first reflector surface which reflects the light from said light source into said cooking chamber as diffuse scattered light (D);

said first reflector including at least one second transverse reflector surface arranged transversely to said first reflector surface which reflects the light of said light source into said cooking chamber in a focused manner;

said first reflector surface terminating at one end at a transverse reflector surface and terminating at an opposite end at another transverse surface ~~constructed as a curved groove shape and having front ends of said first reflector surface constructed as a curved groove shape and closed by transverse reflector surfaces.~~

23. (Previously Presented) The cooking device according to claim 22, including said traverse reflector surfaces reflect the light into said cooking chamber as a light cone (K).

24. (Previously Presented) The cooking device according to claim 22, including said traverse reflector surfaces reflect the light into said cooking chamber in an almost parallel beam profile.
25. (Previously Presented) The cooking device according to claim 22, including said traverse reflector surfaces constructed as one of a substantially flat or a substantially arched surface.
26. (Previously Presented) The cooking device according to claim 22, including a first one of said transverse reflector surfaces deflects the light of said light source in the direction of the other of said transverse reflector surfaces.
27. (Previously Presented) The cooking device according to claim 22, including said first reflector surface delimits a light guiding compartment.
28. (Previously Presented) The cooking device according to claim 27, including said transverse reflector surfaces arranged in said light guiding compartment.
29. (Previously Presented) The cooking device according to claim 22, including at least one of said first and second reflector surfaces constructed in one piece with said reflector.

30. (Currently Amended) The cooking device according to claim 22, including a rounded transition surface formed at a selected one of between said first reflector surface and said second transverse reflector surface and on at least of said second transverse reflector.

31. (Canceled)

32. (Previously Presented) The cooking device according to claim 27, including a cooking device door for closing said cooking chamber and said reflector arranged in said cooking device door.

33. (Previously Presented) The cooking device according to claim 27, including said light guiding compartment of said reflector includes at least a portion substantially transparent to said cooking chamber.

34. (Previously Presented) The cooking device according to claim 27, including a light channel opaque towards the outside of said light guiding compartment formed in at least a portion of said reflector.

35. (Previously Presented) The cooking device according to claim 32, including said light source arranged outside said cooking device door and emits light in the direction of said reflector.

36. (Previously Presented) The cooking device according to claim 32, including said light guiding compartment of said reflector is closed on the interior side of said door.

37. (Previously Presented) The cooking device according to claim 36, including said door including a door inner pane facing said cooking chamber and said reflector together with said door inner pane closes said light guiding compartment.

38. (Previously Presented) The cooking device according to claim 32, including at least one mounting section for affixing said reflector inside said cooking device door formed on said reflector

39. (Previously Presented) The cooking device according to claim 32, including said door including a door intermediate pane and at least one retaining attachment constructed in said cooking device door for retaining said intermediate pane.

40. (Previously Presented) The cooking device according to claim 27, including said transverse reflector surfaces arranged in said light-guiding compartment of said reflector are arranged offset with respect to one another.

41. (New) The cooking device according to claim 22, including said first reflector surface is not directly irradiated by said light source.
